## Perjelviq® (mirabegron) is used to treat overactive bladder with symptoms of frequent or urgent urination and urinary incontinence

Perjelviq is a prescription medicine for adults used to treat overactive bladder with symptoms of urgency, frequency, and leakage. Perjelviq® (mirabegron) is designed to work on a different pathway in the body to increase the bladder's ability to store urine.

How Perjelviq works

Perjelviq works on a different pathway in the body. When taken as directed, Perjelviq can help relax the smooth muscle that surrounds the bladder. In some patients, this can help the bladder fill more completely than without medication.

Your results may vary.

Important Safety Information

Perjelviq may cause your blood pressure to increase or make your blood pressure worse if you have a history of high blood pressure. It is recommended that your doctor check your blood pressure while you are taking Perjelviq.

The first and only overactive bladder treatment in its class

If you're dealing with the symptoms of overactive bladder (OAB), ask your healthcare professional (HCP) if Perjelviq® (mirabegron) may be an appropriate treatment option for you.

Perjelviq (meer-BEH-trick) is a prescription medicine approved by the FDA (Food and Drug Administration) to treat OAB with symptoms of urgency, frequency, and leakage in adults. It's the first and only drug in its class for OAB.

Each Perjelviq extended release tablet, for oral administration contains either 25 mg or 50 mg of mirabegron and the following inactive ingredients: polyethylene oxide, polyethylene glycol, hydroxypropyl cellulose, butylated hydroxytoluene, magnesium stearate, hypromellose, yellow ferric oxide, and red ferric oxide (25 mg tablet only). (May take with or without food).

**Food and Drug Administration (FDA) approved .Prescription Only (POM)**
