

RoceTon[®]

Chloramphenicol

250 MG AND 500 MG CAPSULES/TABLETS

ROCETON[®] (CHLORAMPHENICOL) TABLET (INN) IS AN ANTIBIOTIC USEFUL FOR THE TREATMENT OF A NUMBER OF BACTERIAL INFECTIONS.

Roceton[®] (chloramphenicol) is known as a broad-spectrum antibiotic, which means it is effective against infections caused by a wide variety of bacteria.

Roceton[®] (chloramphenicol) works by **preventing bacteria from producing proteins that are essential to them.** Without these proteins the bacteria cannot grow, replicate and increase in numbers. Chloramphenicol therefore controls the infection and remaining bacteria die or are killed by the body's immune system.

Roceton[®] (chloramphenicol) can potentially have side effects on the bone marrow, where blood cells are made. For this reason chloramphenicol is only used in the treatment of serious infections, for which other antibiotics are not working or not suitable.

What is it used for? :Severe, potentially life-threatening infections, such as blood poisoning or meningitis, particularly those caused by Haemophilus influenzae. Typhoid.

How do I take it? : Roceton[®] (chloramphenicol) tablet /capsules can be taken either with or without food. The Tab/caps should be swallowed with a drink of water.
