TONBUCA®
(temozolomide) capsules
20mg 100mg 250mg

Tonbuca® This medication is used to treat certain types of brain cancer. Temozolomide belongs to a class of drugs known as alkylating agents. It works by slowing or stopping the growth of cancer cells.

This medication is **used to treat certain types of brain cancer. It is a chemotherapy drug that works by slowing cancer cell growth.**

In some patients, temozolomide decreases the size of brain tumors. OTHER This section contains uses of this drug that are not listed in the approved professional labeling for the drug but that may be prescribed by your health care professional. Use this drug for a condition that is listed in this section only if it has been so prescribed by your health care professional. This medication may also be used to treat other types of cancer (such as bone cancer).

HOW TO USE: Read the Patient Information Leaflet provided by your pharmacist before you start using temozolomide and each time you get a refill. If you have any questions about the information or if you are not certain which days of the treatment cycle to take your medication, consult your doctor or pharmacist. Take this medication by mouth, usually once daily or as directed by your doctor. To reduce nausea and vomiting, take it on an empty stomach (1 hour before or 3 hours after a meal) or at bedtime, unless otherwise directed by your doctor. To make sure the amount of medicine in your body is kept at a constant level, take it at the same time every day in relation to a meal (e.g., always 1 hour before the evening meal or always **3 hours after the evening meal**).

Swallow the capsules whole with a full glass of water (8 ounces or 240 milliliters).

The dosage is based on your medical condition, body size, and response to therapy. Do not crush, chew, or open the capsules. If the capsules are accidentally opened or damaged, avoid inhaling the medication, and do not let it touch the skin or mucous membranes (e.g., inside the nose). **If contact occurs, flush the area with water.**

Since this drug can be absorbed through the skin, women who are pregnant or who may become pregnant should not handle this medication.

Do not increase your dose or take this medication more often without your doctor's approval. Your condition will not improve any faster and the risk of serious side effects may be increased.
