

TREAT EPILEPSY AND PREVENT SEIZURES,
ALSO TO PREVENT MIGRAINE ATTACKS

TOPAMET® -15
topiramate tablets 

TOPAMET® tablets 15mg contain topiramate, an anticonvulsant used to treat epilepsy and control seizures, also to prevent migraine attacks.

What is TOPAMET® used for?

TOPAMET® tablets 15mg are used to treat epilepsy in adults and children to control seizures, which happen when there is abnormal electrical activity in the brain. TOPAMET® tablets 15mg are used as monotherapy (on its own) for adults and children (over 6) who have just been diagnosed with idiopathic epilepsy (of unknown cause) and who have either generalised tonic-clonic seizures, seizures affecting the whole brain (**formerly known as grand mal seizures**), which usually last 1-3 minutes; or partial seizures, which affect only part of the brain but can spread to the whole brain and these are called secondarily generalised seizures. TOPAMET® tablets 15mg are also used in addition to another medication for controlling seizures in adults and children (over 2 years of age) in partial onset seizures, generalised tonic-clonic seizures but who have been unable to achieve control of seizures with other medications; also in children for treatment seizures associated with of Lennox-Gastaut syndrome, a form of childhood-onset epilepsy that causes frequent seizures and developmental problems. *TOPAMET® tablets 15mg are also used for the prevention of migraines in adults who have regular migraines (3 or more per month).*

Topiramate is a sulfamate-substituted monosaccharide. TOPAMET® (topiramate) Tablets are available as 15 mg round tablets.
