VIITUXAN® comes in 10 mg, 20 mg, and 40 mg pills. Most patients start with one 10 mg dose daily for 7 days. Your dose will then increase to 20 mg daily in the second week, and 40 mg daily in the third week and onward.

Take VIITUXAN with food and exactly as your doctor has instructed.

VIITUXAN may not work as effectively on an empty stomach.

**Viituxan**[®]
vilazodone HCl
10 mg, 20 mg, 40 mg tablets

Viituxan[®]
vilazodone HCl
10 mg, 20 mg, 40 mg tablets

VIITUXAN® (vilazodone HCl), a medication used for the treatment of major depressive disorder (MDD) in adults. According to two eight-week, randomized, double-blind, placebo-controlled trials in adults, vilazodone elicits an antidepressant response after one week of treatment.

In two 8-week studies, **patients who used VIITUXAN experienced significant improvement in their symptoms of depression. VIITUXAN is the first drug of its kind approved by the FDA for treating depression in adults. While the exact way VIITUXAN—or any other medication for depression—works is unknown, it is thought to affect the activity of serotonin in the brain.**

VIITUXAN is one possible treatment option. Talk to your doctor today to learn more about depression and if VIITUXAN is right for you. VIITUXAN is the first drug of its kind approved by the FDA to treat depression in adults. While the exact way VIITUXAN—or any other medication for depression—works is unknown, it is thought to affect the activity of serotonin in the brain.

In two 8-week studies, the effect of VIITUXAN was measured on a scale that evaluated symptoms of depression, including:

- Apparent or reported sadness
- Difficulty performing daily activities
- Inner tension
- Reduced interest in daily activities
- Reduced sleep
- Negative thoughts
- Reduced appetite
- Thoughts of suicide
- Difficulty concentrating

Patients who took VIITUXAN in these studies experienced significant improvement in their depressive symptoms compared with those who took placebo ("sugar pills").

VIITUXAN should be titrated to the 40 mg dose, starting with an initial dose of 10 mg once daily for 7 days, followed by 20 mg once daily for an additional 7 days, and then increased to 40 mg once daily.

Active ingredient: vilazodone hydrochloride

Food and Drug Administration (FDA) approved .Prescription Only (POM)

Treatment for: Depression
VIITUXAN® (vilazodone) is a dual-acting potent and selective serotonin reuptake inhibitor and a 5-HT_{1A} receptor partial agonist indicated for the treatment of major depressive disorder (MDD).
VIITUXAN® tablets should be swallowed whole
Do not chew, break or crush the tablets.
